

Cold cathode from Cathode Lighting Systems offers a multitude of advantages over all other types of lighting. The long-term reliability, beauty, and simplicity of this product has been proven time and again over the last 60 years. Among our custom cold cathode's many unique features:

**FLEXIBILITY**

Lamps can be bent and shaped to almost any configuration.

**CONTINUITY**

With minimal space between lamps, shadowless illumination is achieved.

**HIGH LIGHT OUTPUT**

Cathode Lighting Systems offers several different systems for varying applications, with light outputs up to 709 lumens per linear foot (2340 lumens per meter).

**COLOR**

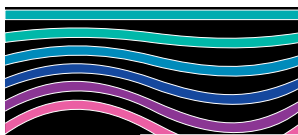

Dozens of pastel and neon colors are available, as well as a wide array of high-color-rendering white hues.

**LONG LIFE**

Lamp life is extremely long, typically 50,000 hours or more. There is no loss of lamp life each time the lamp is turned on (unlike fluorescent lighting), allowing for a lamp life almost five times that of most fluorescents.

**DIMMABILITY**

Easily dimmed with architectural grade dimmers without resorting to special transformers and ballasts.

**CREATIVITY**

A wide expressive range, with an infinite variety of shapes and colors.

**UL LISTED**

A cold cathode system from Cathode Lighting Systems carries multiple UL (Underwriters Laboratories) and C-UL (UL for Canada) listings that cover each individual component as well as the completely installed lighting system. This ensures that our products, whether used commercially or residentially, have been engineered and manufactured to the highest levels of safety and reliability.
