

LAMP SHAPE AVAILABILITY

Cathode Lighting Systems can manufacture cold cathode lamps in a wide variety of shapes, curvatures, and lengths. Lamps are available in four basic shapes: straight, bent, curved, and free-form. Almost any architectural detail can be followed using custom cold cathode lamps with few restrictions. As noted below, lamps can only be manufactured to curve or bend in one plane.

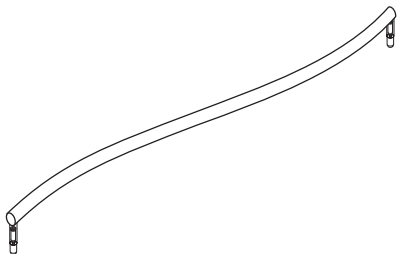

◀ Straight lamps are available in lengths up to 93" (2400mm).

◀ Bent lamps are available in lengths up to 93" (2400mm).

◀ Curved lamps are available in lengths up to 93" (2400mm).

◀ Free-form or serpentine shaped lamps are available in lengths up to 93" (2400mm).

PLEASE NOTE: Although we can fabricate lamps in almost any shape and size, we cannot manufacture lamps that are curved or bent in more than one plane.
