

# SYSTEM BNP-HO

High-Output Ballast-Operated Cold Cathode

Typical System Configurations

System type: **BNP-HO**

Configuration: **Continuous loop/nonremote ballasts**

Lampholder mounting shown: **Surface\***

This design is typical for continuous circular, elliptical, or rectilinear configurations in which it is desirable to locate the ballast underneath the lamps. Please note: Ballasts are sound rated *B*, and they will produce a slight audible hum when system is being dimmed. Please consult factory for questions regarding acceptable noise levels for your lighting application.

\*Configurations in which ballasts are located underneath lamps are not suitable for use with recess-mounted lampholders unless special provisions are made to recess-mount the ballasts.

# SYSTEM BNP-HO

High-Output Ballast-Operated Cold Cathode

Typical System Configurations (cont'd.)

System type: **BNP-HO**

Configuration: **Continuous loop/remote ballasts**

Lampholder mounting shown: **Surface**

This design is typical for continuous circular, elliptical, rectilinear, or free-form configurations in which ballasts are remotely located.

Lampholders shown in diagram are surface-mounted models (type BL).

Lampholders are also available in recess-mounted models (type BL-R).
